

Feature Roadmap & Development Costing

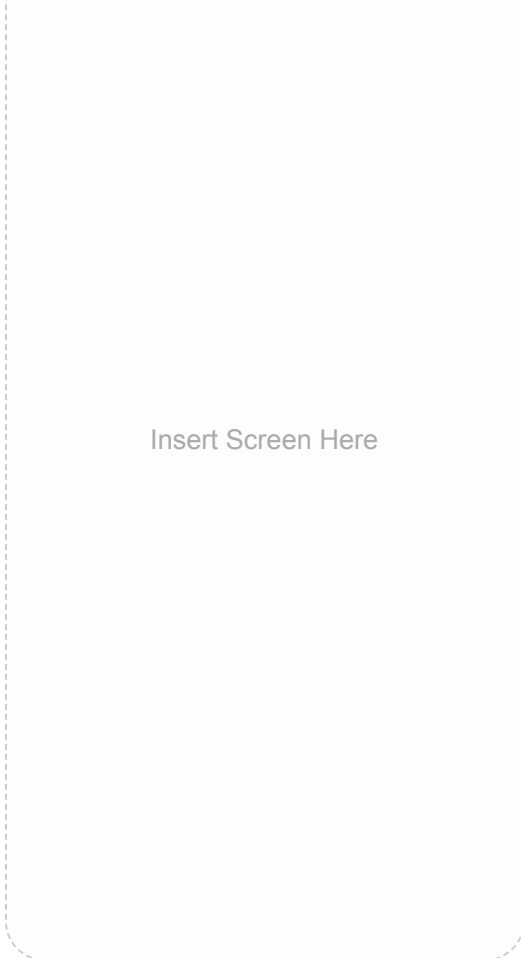

This document outlines the engineering requirements, functional logic, and development costs for each module of the Restaurant Application. Costs include frontend development, backend API integration, and database architecture.

Full App Preview (Combined Screens)

Visitor Module Development

IMPLEMENTATION

1. Welcome & Onboarding

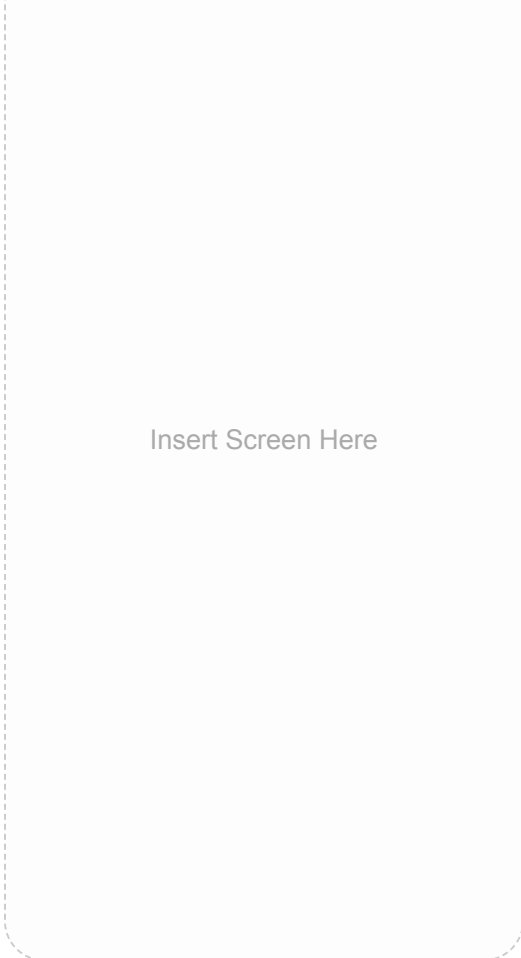

Building a high-performance entry point with localized authentication and cultural branding.

- OTP-based Phone Authentication
- Social login (Google/Facebook)
- Bilingual UI (Urdu/English) support

DEV COST **Rs. 10,000**

GEOFENCING

2. Location Selection

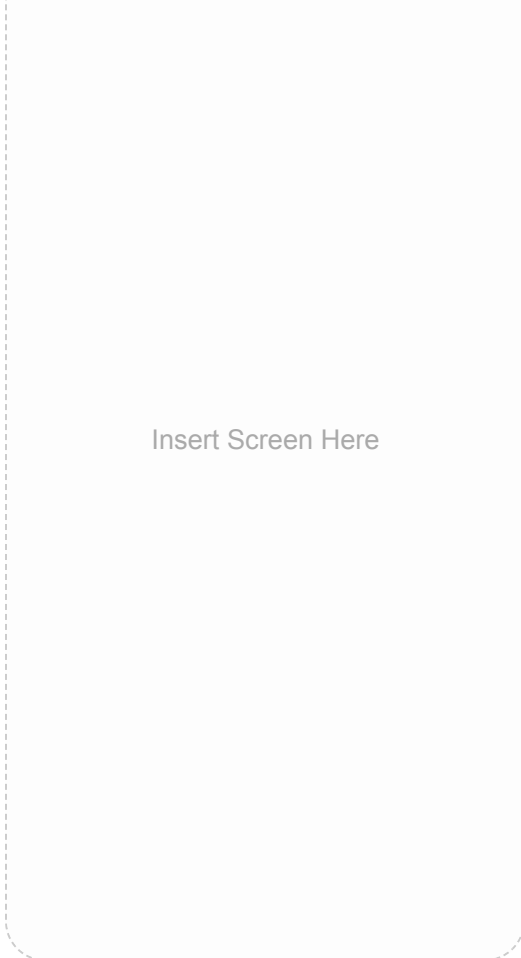

Integration of Google Maps API for precise delivery geofencing and branch allocation logic.

- Real-time Lat/Long coordinate capture
- Reverse geocoding for address auto-fill
- Polygon-based delivery zone validation

DEV COST **Rs. 12,000**

CATALOG ENGINE

3. Home / Menu Screen

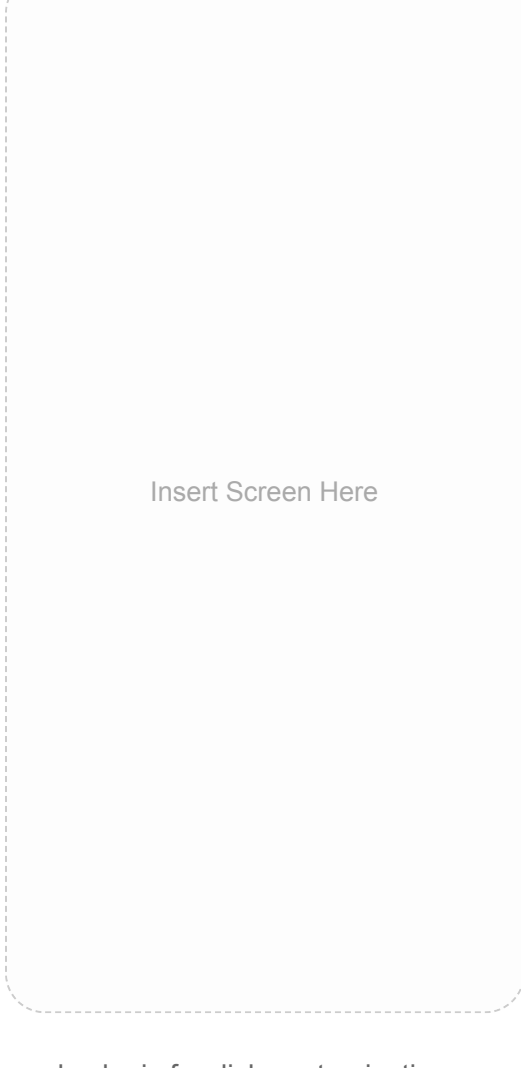

The primary interface for browsing Pakistani staples (Biryani, Nihari) with category-based filtering.

- Dynamic menu fetching via REST API
- Multi-category horizontal navigation
- Smart search & auto-complete

DEV COST **Rs. 25,000**

LOGIC & MODIFIERS

4. Food Detail Screen

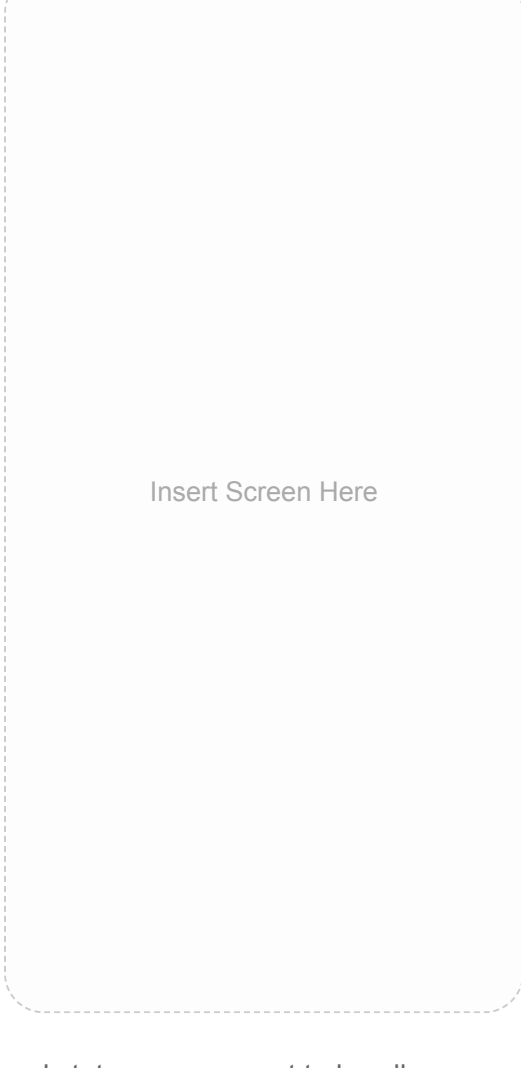

Complex logic for dish customization, including spice levels for Karahis and optional add-ons.

- Variant handling (Single vs. Full plate)
- Conditional modifier pricing logic
- High-res asset loading optimization

DEV COST **Rs. 15,000**

STATE MANAGEMENT

5. Cart Screen

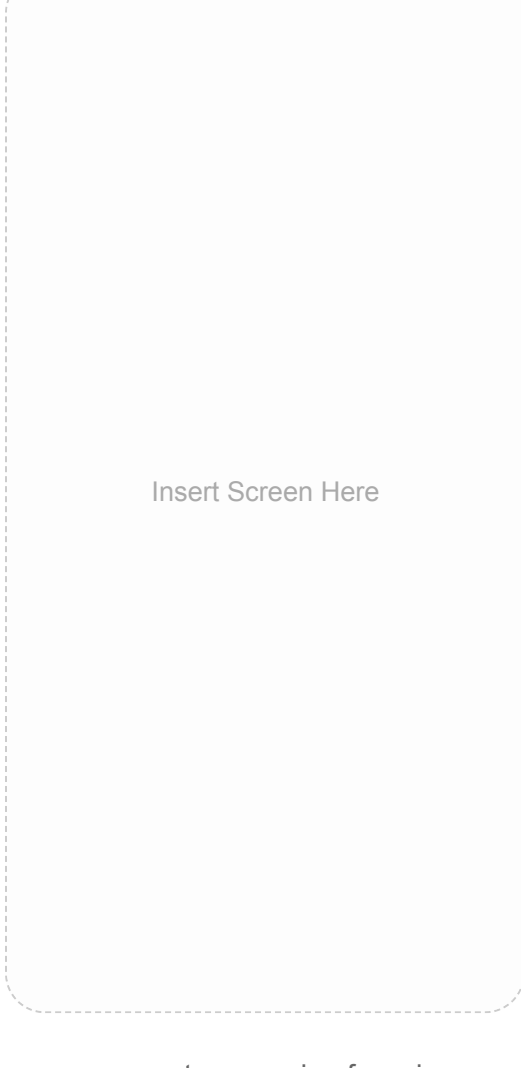

Local state management to handle persistent baskets across app sessions.

- Cross-session cart persistence
- Voucher validation logic engine
- Automatic tax/delivery fee calculation

DEV COST **Rs. 12,000**

GATEWAY INTEGRATION

6. Checkout Screen

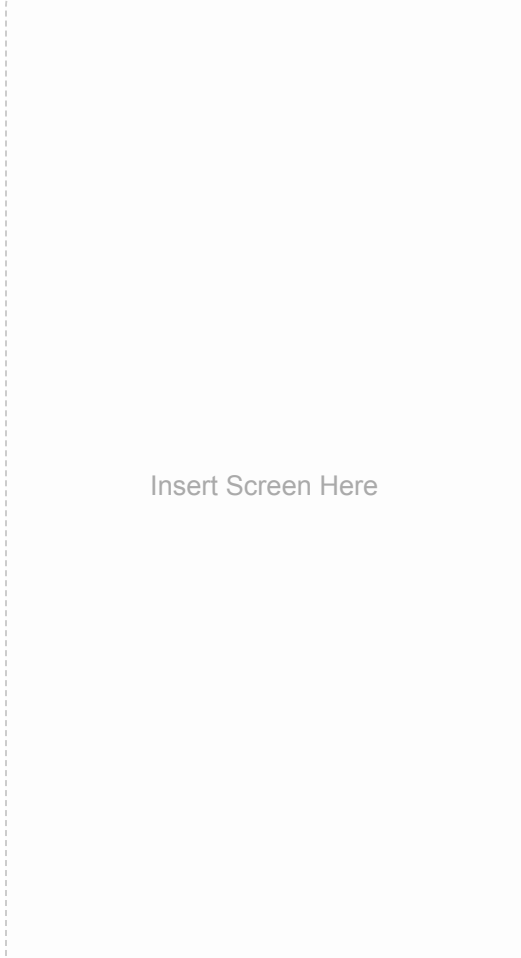

Secure payment processing focusing on Pakistani payment habits like COD and Easypaisa/JazzCash.

- Payment gateway API integration
- Scheduled delivery time slotting
- Final order payload verification

DEV COST **Rs. 18,000**

REAL-TIME SYNC

7. Order Tracking

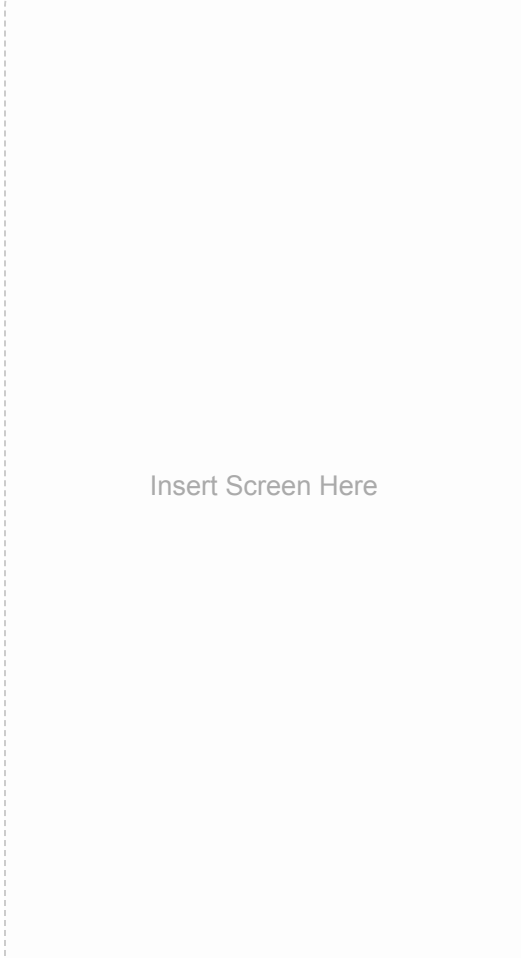

Real-time socket connection for live updates between the kitchen, rider, and customer.

- WebSocket-based order status updates
- Google Maps Rider Tracking integration
- Push notification trigger system

DEV COST **Rs. 15,000**

CRM LOGIC

8. Rewards / Points

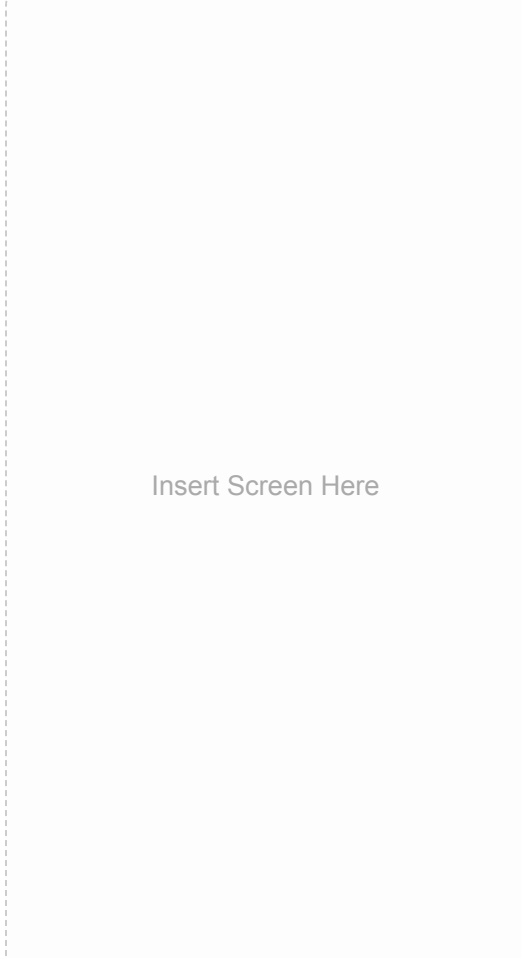

Gamified loyalty engine to reward frequent orders with digital credits.

- Point accumulation algorithm
- Referral tracking system
- Tiered membership unlock logic

DEV COST **Rs. 10,000**

DATA SYNC

9. Profile Screen

User data management center for past orders, saved addresses, and security settings.

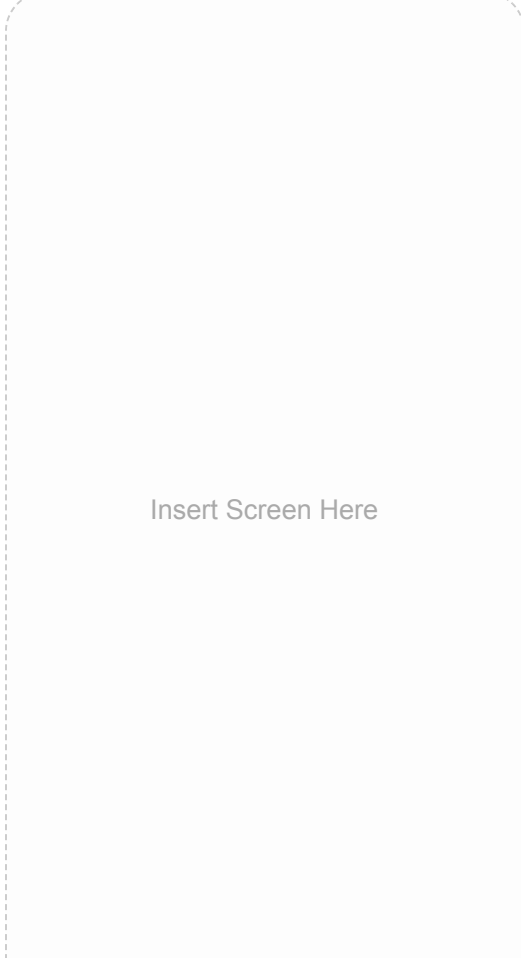

- Order history with "Reorder" logic
- Encrypted profile storage
- Customer support chat integration

DEV COST **Rs. 13,000**

Manager Module Development

ANALYTICS ENGINE

1. Dashboard (Stats)

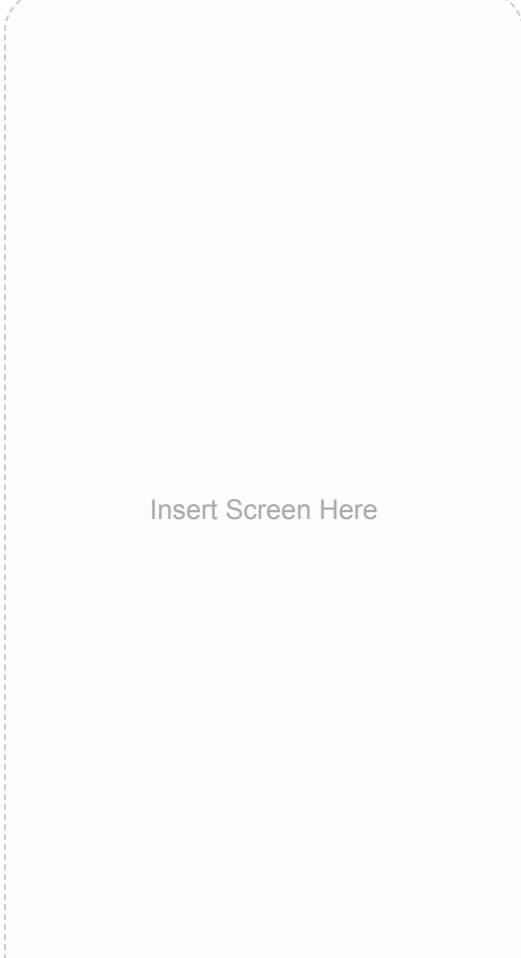

Data aggregation layer that translates raw orders into actionable business insights.

- Daily/Monthly revenue charting
- Average order value (AOV) tracking
- Branch-wise performance metrics

DEV COST **Rs. 25,000**

INVENTORY CONTROL

2. Menu Management

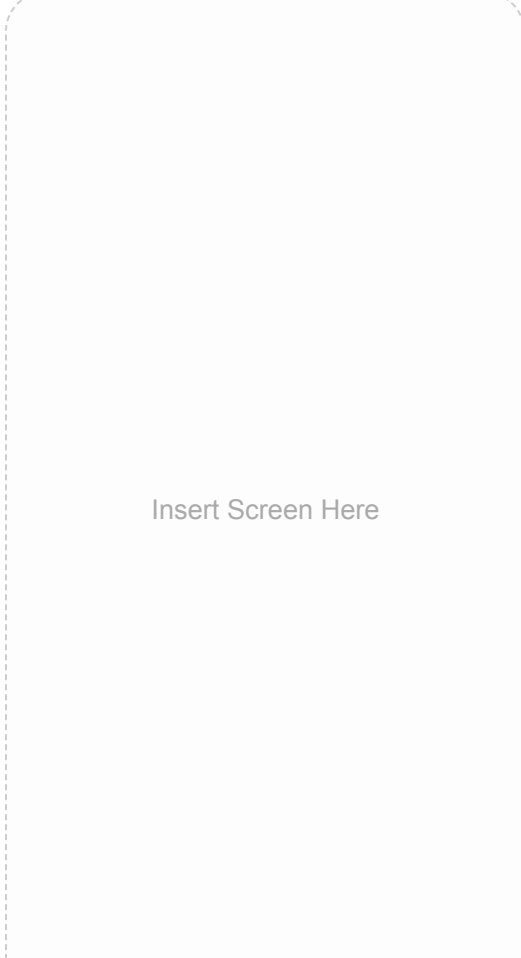

Administrative interface for real-time inventory and pricing adjustments.

- Master inventory toggle (In/Out of stock)
- Price fluctuation management
- Product imagery & description updates

DEV COST **Rs. 20,000**

LOGISTICS OPS

3. Live Order Queue

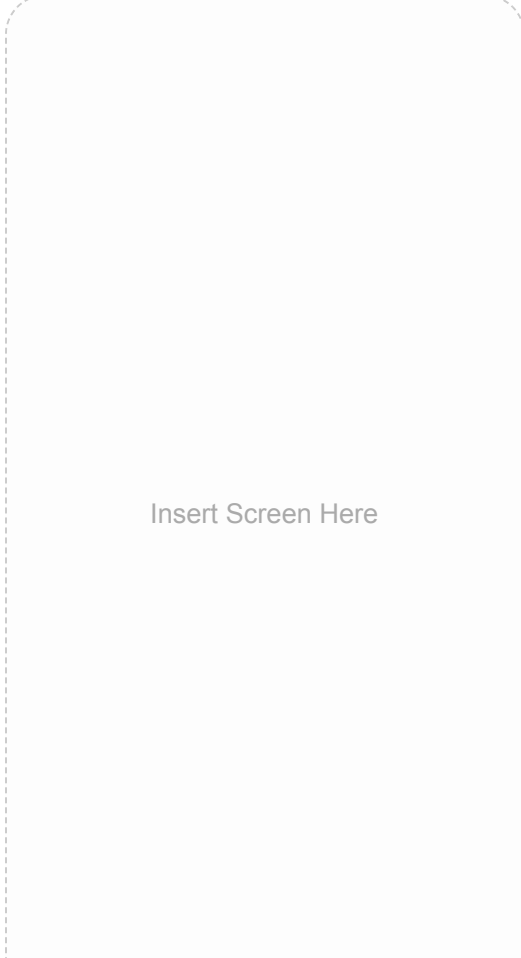

The operations hub for managing incoming orders and dispatching riders.

- Interactive kitchen management board
- Rider assignment & payout tracking
- Delay alert & priority queueing

DEV COST **Rs. 20,000**

CAMPAIGN LOGIC

4. Promotions Management

Marketing module for creating and deploying app-wide sales campaigns.

- Dynamic banner scheduling
- Coupan code generation engine
- Campaign ROI tracking statistics

DEV COST **Rs. 15,000**

Project Development Budget

Visitor Frontend & API Integration (9 Screens)	Rs. 1,30,000
Manager Operations & Admin Backend (4 Screens)	Rs. 80,000
UI Design, Animation, & System Integration Buffer	Rs. 20,000

Grand Total Project Cost **Rs. 2,30,000**

This cost includes end-to-end development, testing, and deployment to staging environments.
